Office Action Summary

Art Unit: 1754

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 19-51 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hamwi et al. 'Fluorination ...'.

Hamwi teaches on pg. 723 fluorinating nanotubes with IF5. The examiner takes Official Notice that the claimed fluorinating agents are old and known as fluorination agents, and the single walled nanotubes are old and known. Hamwi teaches a wide range of temperatures and degrees of fluorination, and differs in not teaching SWNTs; only multi-walled tubes. However, it would have been obvious to one of ordinary skill in the art at the time the invention was made to use SWNTs in the process of Hamwi because doing so makes a treated carbon nanotube, for catalytic or chemical purposes.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
